Bio-Zyme Instructions

Bio-Zyme Cleaner for all Domestic Uses and Drain Maintenance

(MPI C32)

Where to use

On all washable surfaces in and around the home, including; bathrooms, kitchens, drains, walls, floors, carpets, cars, boats, sports equipment, pet enclosures.

Best tools to use

- Foam application is key to increase the product contact time on the surface. Foam sits - no run off - which allows more effective cleaning.
- 1 Foamer Dual Chamber
- 2 Foamer Handheld 1.5L
- 3 Brush (dish brush)
- 4 Microfiber Cloth
- 5 Scouring pad (non scratch)

How to use

- Dilute 60ml of Bio-Zyme Cleaner to a litre of warm or cold water for all cleaning purposes.
- Foam and agitate with brush or cloth. Rinse, wipe or hose off.
- Monthly shock dose 100ml of Bio-Zyme Cleaner concentrate down the drain to avoid drain blockages.

Shock dose with Bio-Zyme Industrial

For smelly or blocked drains, and after initial set up or scheduled empty of wastewater treatment system (septic):

- Pour 2L of Bio-Zyme Industrial down the furthest internal drain - being toilet, shower or basin. Then, flush or run 1L of water down to disperse product into drain. Ideally done at night when there less use of toilets/showers.

If using traditional Products

Shock Dose 500ml Weekly into drain

We are endorsed by:

- NZ's Leading Wastewater Treatment Manufacturers
- NZ City Councils
- Sustainable Drains

Bio-Zyme is Septic Preferable as it conditions and enhances the contents of your wastewater treatment and plumbing system.

YOUR GUIDE FOR RURAL AND URBAN CLEANING

Did you know?

FACT	SOLUTION
Some personal medications - antibiotics, chemotherapy medicines, etc - can upset the bacterial balance, the storage capacity and block leach drains in your septic system.	Pour 60ml concentrate of Bio-Zyme Industrial daily down any drain, and continue for 10 days after conclusion of medication.
Blocked Drains: In most cases, a blocked drain is caused by FOGs - an accumulation of matter such as fat, residual food, hair and body fat throughout the pipework.	This can be easily solved by using Bio-Zyme Industrial. It efficiently breaks down debris in the drain. Pour 500ml of Bio-Zyme Industrial down the drain. Wait 1 hour , then repeat the process. If drain doesn't unblock, then call your plumber - maybe the problem is with seals and pipework.
It is fundamental to clean washing machine and dishwasher . Over time, soap residue and food debris can build up in these appliance causing odours and malfunctioning.	You can use Bio-Zyme Industrial to clean an empty dishwasher and washing machine. Simply pour 100ml into where detergent or softener goes and set on wash cycle. This cleans machine and drains.

General cleaning

- ☑ Powder and Liquid are preferable products for use in dishwashers.
- ☑ Do not flush the following items or blockages will occur: wet wipes and sanitary products.
- ☑ Use Bio-Zyme regularly to maintain and eliminate blockages with Macerator pumps, drip lines and drains.

More about Bio-Zyme
